

The next generation in innovative valve box design...

- Light
- Strong
- Noncorroding
- Interchangeable
- Adaptable

Introducing the latest addition to valve box technology:
The WD Pro-Iron Series

Feature: Light

Typical weight savings of 65% compared to traditional cast iron valve box upper assemblies. This results in easier installation and reduced labour costs.

Feature: Strong

You do not have to pump iron to be strong. Made in Canada for Canadian climates.

Feature: Noncorroding

Valve boxes go underground. Some soil is so aggressive, valve boxes can begin to corrode in a matter of months. The cost of removal and repair of the surrounding area can wreak havoc with your budget. You can't change the soil, but you can change your valve box.

Feature: Interchangeable

Not just for new installations. Easily replace existing damaged valve boxes with Pro-Iron series upper casings.

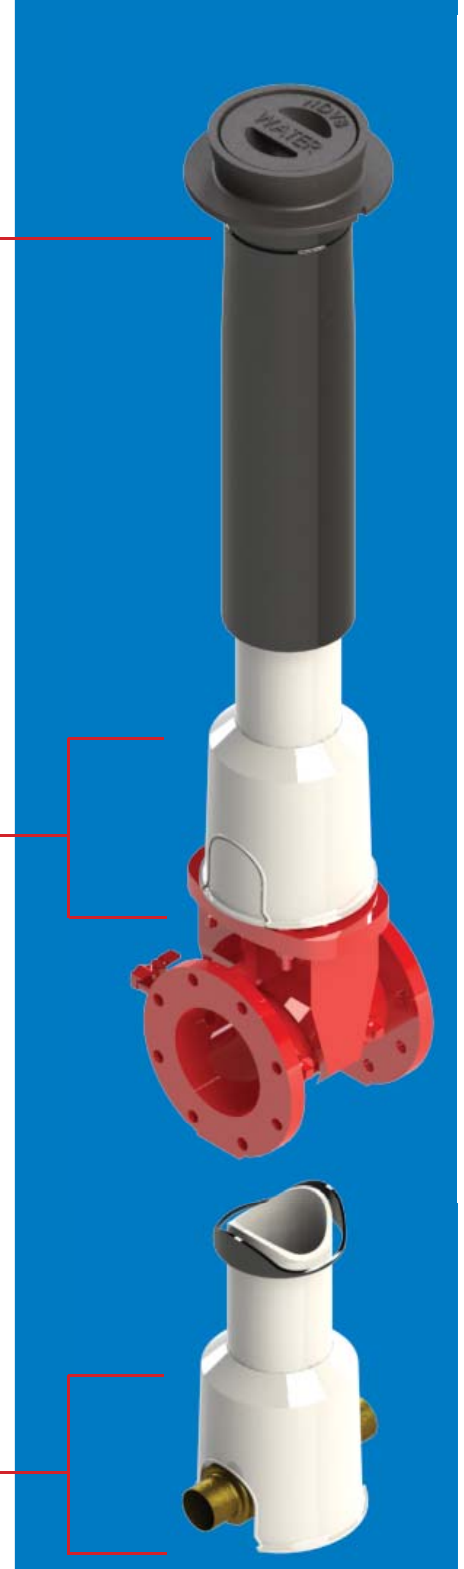

Feature: Adaptable

Integrated knock-outs facilitate a wide range of valve sizes.

Integrated relief supports quicker repairs.

Knock out sections left in for larger valves

Knock out sections removed for closer fit protecting smaller valves

Material Specifications:

Top Socket/Lid: Ductile Iron
Upper Riser: Pro-Iron Polypropylene
Lower Riser: PVC
Base: ABS

PART OF THE  **Industrial Group** THE STRENGTH OF MANY. THE POWER OF ONE.
